253 sudo adduser vivo --gid 1004
254 sudo adduser china --gid 1004
```

/home -> mkdir EVERYONE

```
255 cd /home
256 mkdir EVERYONE
sudo chmod 777 EVERYONE
```

Create a file with every user (whoami >> username.txt)

A terminal window screenshot showing a user named 'absu' at a machine named 'absu-VirtualBox'. The user has navigated to the directory '/home/EVERYONE' and executed the 'ls' command. The output of 'ls' shows a grid of files: absu.txt, cat.txt, elephant.txt, horse.txt, kitkat.txt, new.txt, apple.txt, china.txt, fish.txt, icecream.txt, lolipop.txt, oppo.txt, banana.txt, dog.txt, gun.txt, jelly.txt, marshmallow, and vivo.txt. The prompt shows the user is still in the '/home/EVERYONE' directory.

```
650 history
absu@absu-VirtualBox: /home/EVERYONE$ ls
absu.txt  cat.txt  elephant.txt  horse.txt  kitkat.txt  new.txt
apple.txt  china.txt  fish.txt  icecream.txt  lolipop.txt  oppo.txt
banana.txt  dog.txt  gun.txt  jelly.txt  marshmallow  vivo.txt
absu@absu-VirtualBox: /home/EVERYONE$
```

jelly,kitkat, lolipop, marshmallow -> add these users to sudo group

```
sudo usermod oppo -g one
sudo usermod vivo -g two
sudo usermod jelly -G sudo
sudo usermod kitkat -G sudo
sudo usermod lolipop -G sudo
sudo usermod marshmallow -G sudo
cat /etc/group
```

fish,gun -> add these users to one group as well (secondary group)

```
sudo usermod fish -G one
sudo usermod gun -G one
```
